- SPCC Plans
- Waste Minimization
- RCRA Permitting & Facility Investigations
- Facility Compliance Audits

## PROTECTING YOUR BUSINESS INTERESTS

Atwell's compliance specialists advise clients in the manufacturing, heavy industrial and power markets on proactive solutions to manage environmental compliance, permitting and health and safety programs.

## SOLUTIONS THAT SURPASS

### Audits for Automotive Acquisition

In addition to general consulting and environmental site assessments, Atwell has provided ongoing environmental compliance services for a global supplier of metal-formed components and assemblies for automotive manufacturers. When a fast-tracked corporation acquisition was on the horizon, Atwell led the environmental inspection of more than 20 facilities in North America, Europe and Asia related to the pending deal. With a compressed schedule, Atwell executed the site, facility and system audits seamlessly, providing the necessary command of applicable regulations related to the client, the US standards and foreign standards to produce the necessary data required for negotiations and risk management.

### Contamination Cleanup in China

For more than five years, Atwell has been providing ongoing environmental site assessments including soil-gas, indoor and ambient air sampling/monitoring and soil and groundwater investigations to identify source areas for contamination, delineate the extent soil and groundwater impacts and evaluate the risks associated with the on- and off-site contamination at this international textile manufacturing plant. Additional subsurface investigations have been conducted for the risk assessment and feasibility studies. As a result, Atwell was able to implement corrective actions for the client including the replacement of the site's wastewater collection system and groundwater remediation, with additional ongoing assessments and improvements still taking place.
