

LANDSCAPE ARCHITECTURE

WHY ATWELL?

- Local expertise, national reach
- Industry knowledge
- Dedicated experts and teams
- Full-service resources
- Aggressive, passionate professionals
- Nimble, flexible structure

CAPABILITIES

- Site Analysis
- Natural Features Analysis & Site Planning
- Tree Survey/Condition Assessments
- Design Idea Generation/Conceptual Plant Massing Plans
- Preliminary & Final Landscape Designs
- Landscape Maintenance Planning
- Specification Standards
- Ordinance Compliance Calculations
- Hardscape Design & Detailing
- Streetscape Design
- Recreation Facilities Planning & Design
- Irrigation Design
- Sustainable/Low-Impact Design
- Presentation Graphics & Renderings

BUILDING BEYOND THE BRICKS

Innovative and creative landscape architecture enhances the appeal and marketability of commercial and residential development. Atwell's landscape architects employ an interactive approach to landscape architecture through a four-step design process – visualization, customization, integration and implementation.

This process is essential to developing strong designs that address socio-behavioral, environmental and aesthetic preferences and provide an attractive, functional, sustainable product. Our professionals capture your vision in their designs by combining concept drawings, sketches, images, and materials in a collaborative environment.

SOLUTIONS THAT SURPASS

Industrial Portfolio Landscape Architecture Program

A national industrial developer hired Atwell to produce appropriate landscape architecture plans in conjunction with the construction of eight industrial flex facilities in northeastern Ohio.

Featuring a mix of office and warehouse environments, the team designed complementary, functional plans for each location. Services included conceptual and final planting design for the building foundation and entrance areas; irrigation design; hardscape designs, including signage and wayfinding elements; and construction management services.

Therapeutic Design for Dementia Patients

Atwell designed a therapeutic garden for an assisted living facility. Located in the midwestern United States, the facility serves a diversity of patients, including those suffering from various forms of dementia. The garden was designed in two sections to accommodate the unique needs of dementia patients who, for example, tend to walk in circles.

The design created multiple sensory experiences through sound, smell, feel and color, and provided an environment where residents can plant flowers, herbs and vegetables. The garden showcases a variety of perennials and grasses, with plant material selected to provide four seasons of interest at the facility.
